Continue to Build our Use Case Taxonomy

As an open standards Blockchain Community: we'd like to continue to develop our use case taxonomy

So that we can:
catalog and exhibit "results of experimentation" and help the Community interpret/understand Blockchain problem sets ("What am I trying solve?")

We are done when:
1)We have developed an online mechanism that is easily maintained by the Blockchain Community

2)We have created a high quality visualization of use cases that exhibits real world information and helps people avoid "Blockchain" hype

Create a Dynamic Implementation Repository

As an open standards Community: we'd like to set up an open, dynamic Blockchain Implementation repository

So that:
the Community can learn from real world, tried and true implementation successes and failures (modeling after Lean Startup mindset "fail fast, learn fast")

We are done when:
1)We have created working dynamic Blockchain that contains our industry use cases

2)3rd Parties can easily leverage this resource as a Blockchain educational resource

Appendix: Blockchain Community Group Objectives

Proposed Objectives:
- "Buzz Central"- Become a central network for classifying and understanding Industry Blockchain use cases
- Maintain and publish use case taxonomy
- If feasible, the Community may develop open implementations of Blockchain, fostering an innovation laboratory for industry users who are seeking to understand and "play with" Blockchain in a safe, experimental fashion

Co-Chairs & Core Scrum Team: Colleen Kirtland (Pacific Life), Michael Palage Esq., Youngwhan Lee, Mountie Lee
Responsibilities:
- Provide direction and leadership for the Blockchain community
- Ensure that the Community is making progress toward objectives
- Maintain an open collaboration among participants
- Help facilitate decision making if there is disagreement within the group
