

2.2.1.2 Title

Web IDL syntax:

```
readonly attribute DOMString title getraises (NoValue);
```

Description:

The `title` property defines the title of the document, or the name given to the resource.

Return type:

A `DOMString` that holds the title as a plain string.

Exceptions:

The `NoValue` exception is thrown if no value is available.

Example:

```
"MAWG Stockholm 20090626"
```

Usage as a service:

Request: <http://example.com/my-media-resource/?ma-query=property>

Response (JSON format): `"title" : "MAWG Stockholm 20090626"`
