

The Siemens logo, consisting of the word "SIEMENS" in a bold, teal, sans-serif font, is positioned in the top left corner. It is set against a white rectangular background that has a thin black horizontal line below it. The background of the entire slide is a high-contrast image of Earth from space, with a bright sun on the right side creating a lens flare effect.

Converging on WoT Architecture

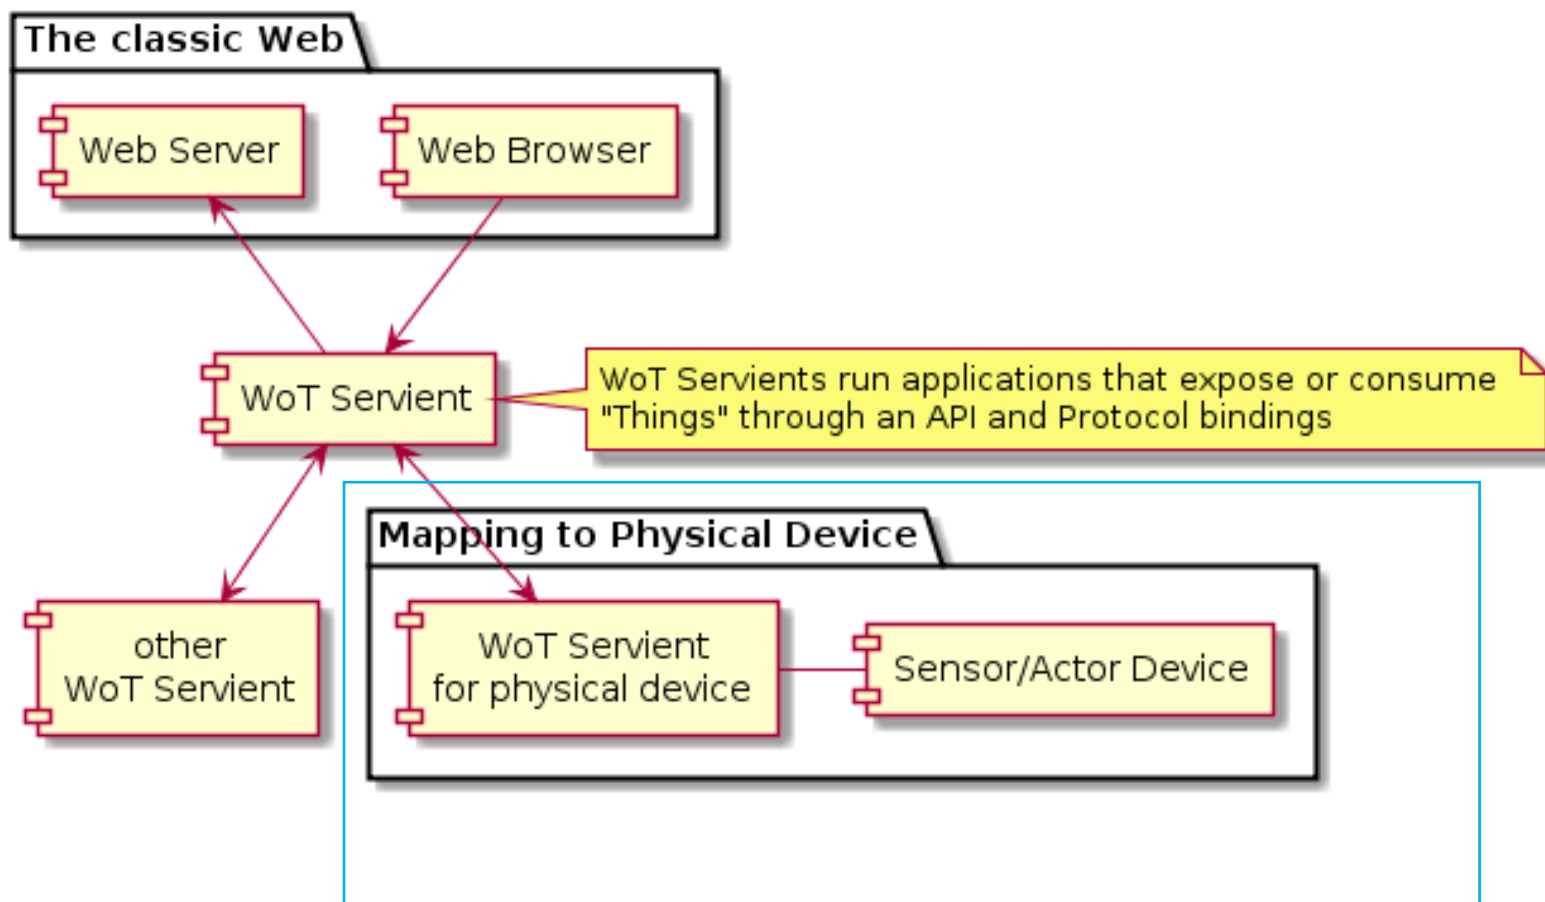

Architecture sketch

Architecture sketch in plantUML

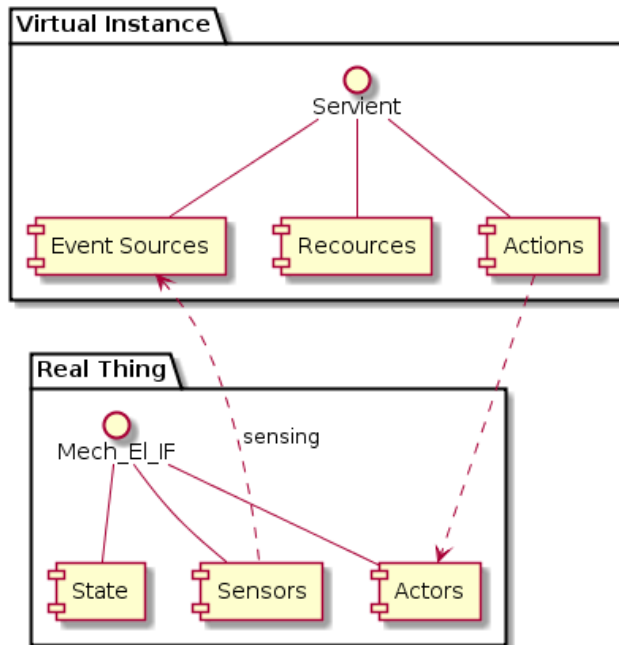

How does this map to real world things ...

How do WoT Servients
map to real things?

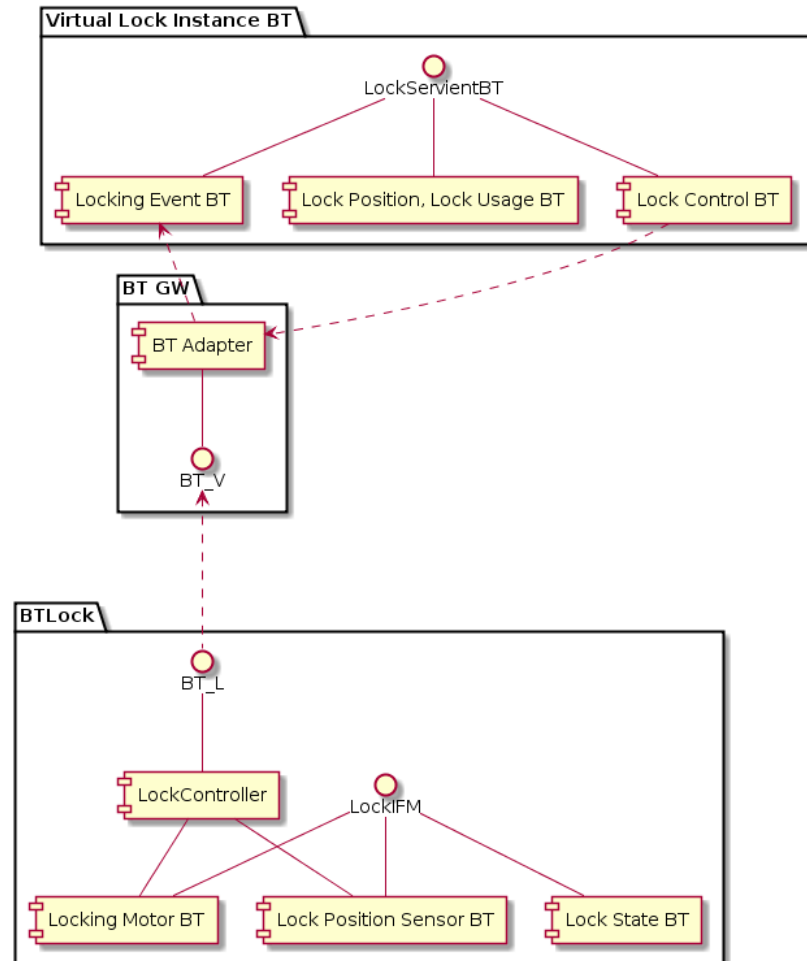

Real Things accessible via Servients in the Web ...

Principle Model

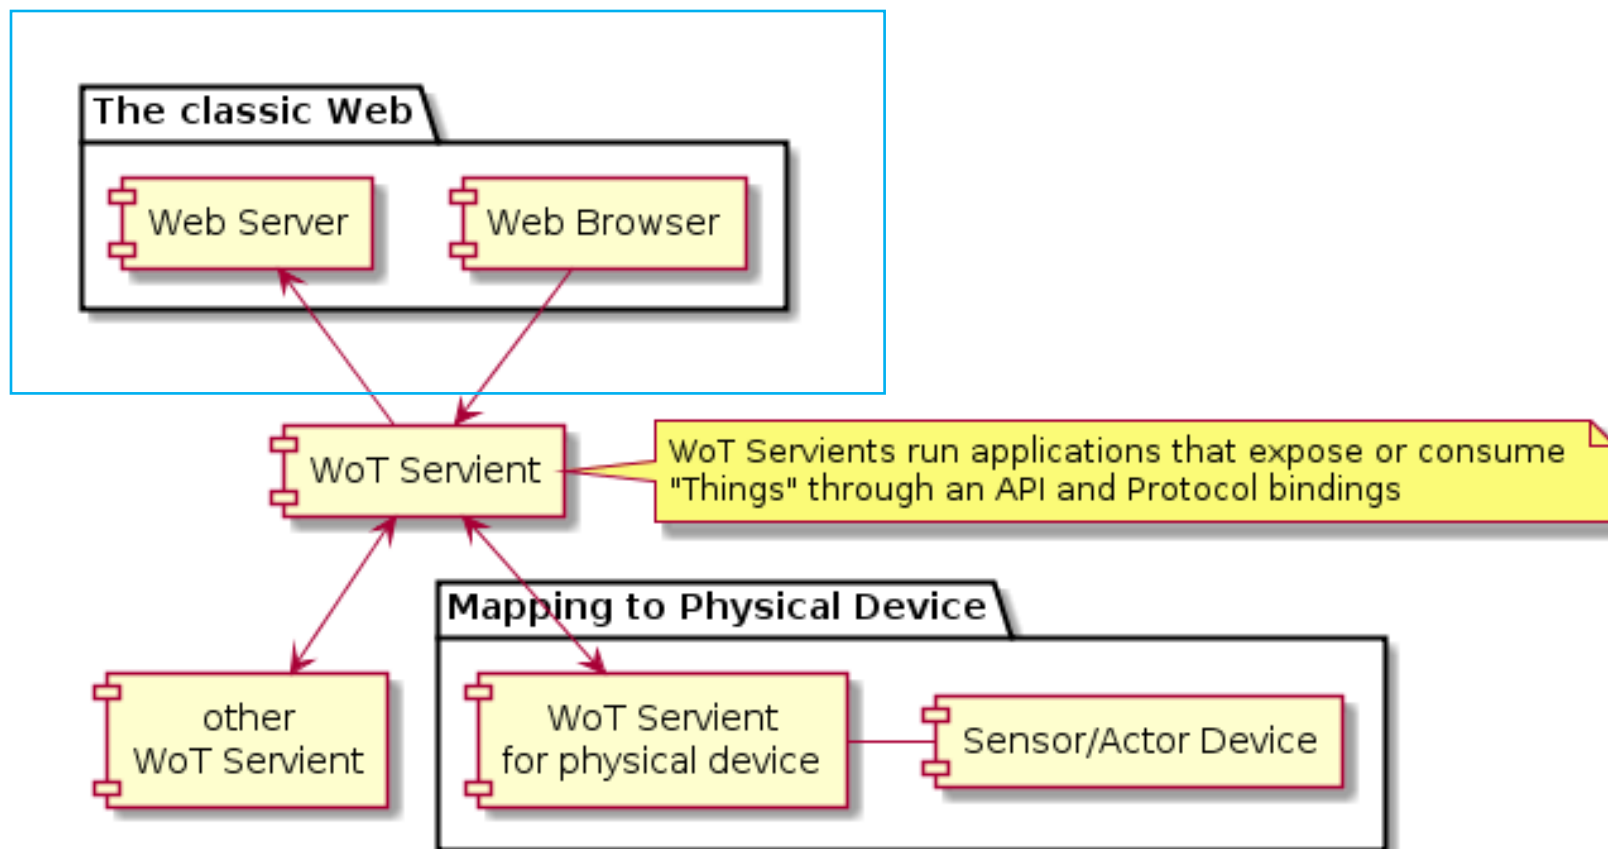

Mech_EI_IF: mechanical and/or electrical interface
 BT: Bluetooth

Real Implementations for legacy devices (e.g. a bluetooth lock)

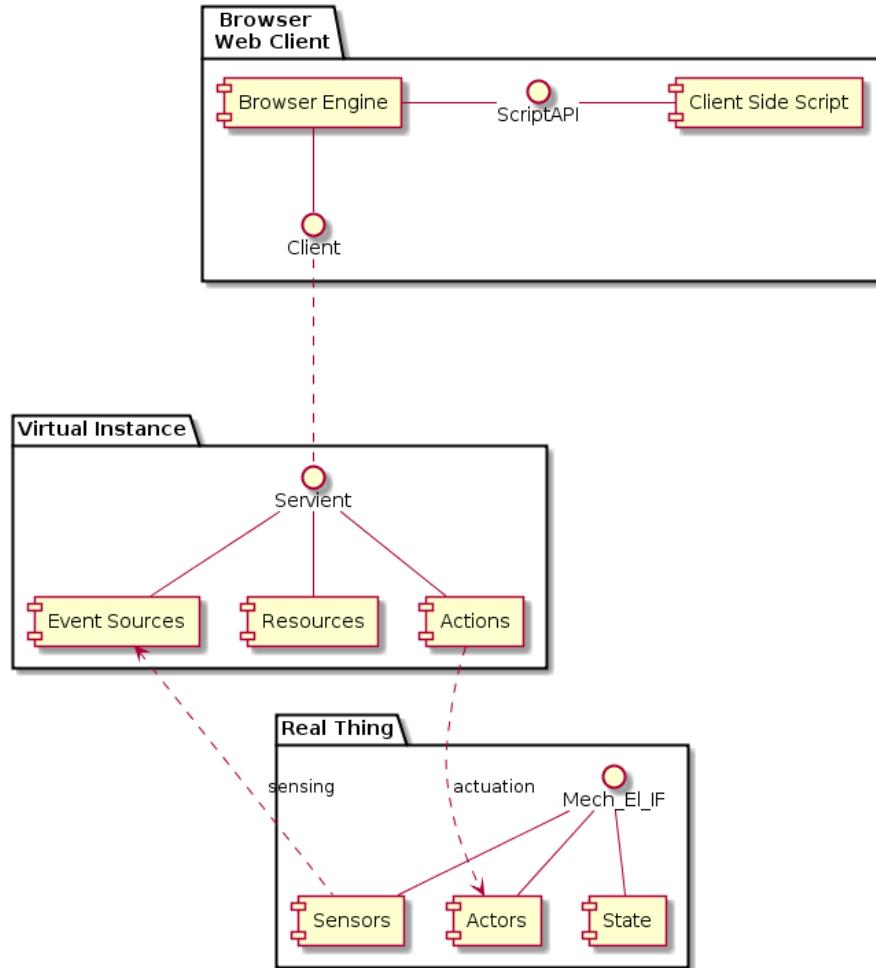

Real Things interacting via the Web ...

How are things accessible from today's web?

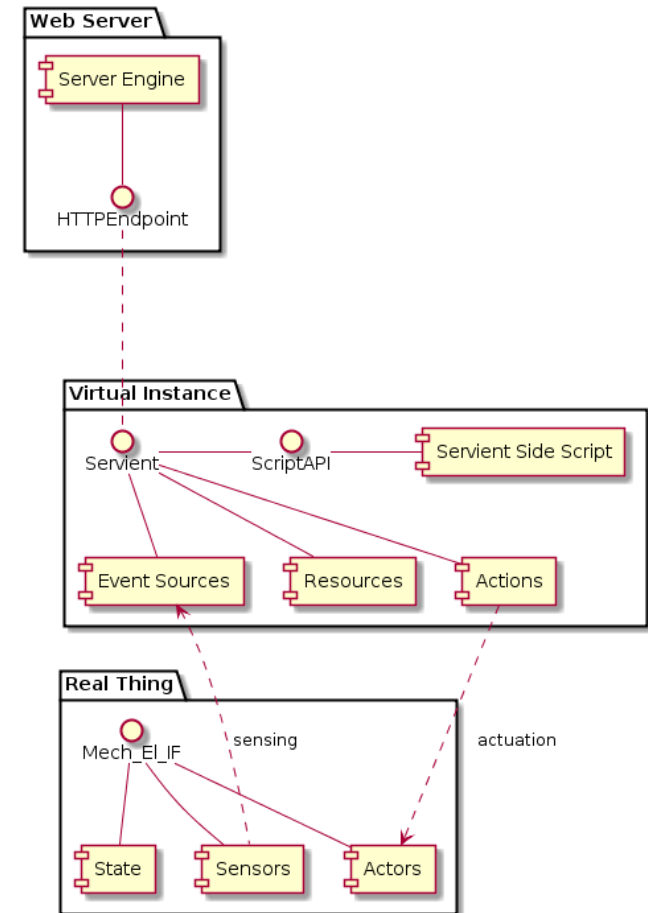

How are things accessible from today's web ...

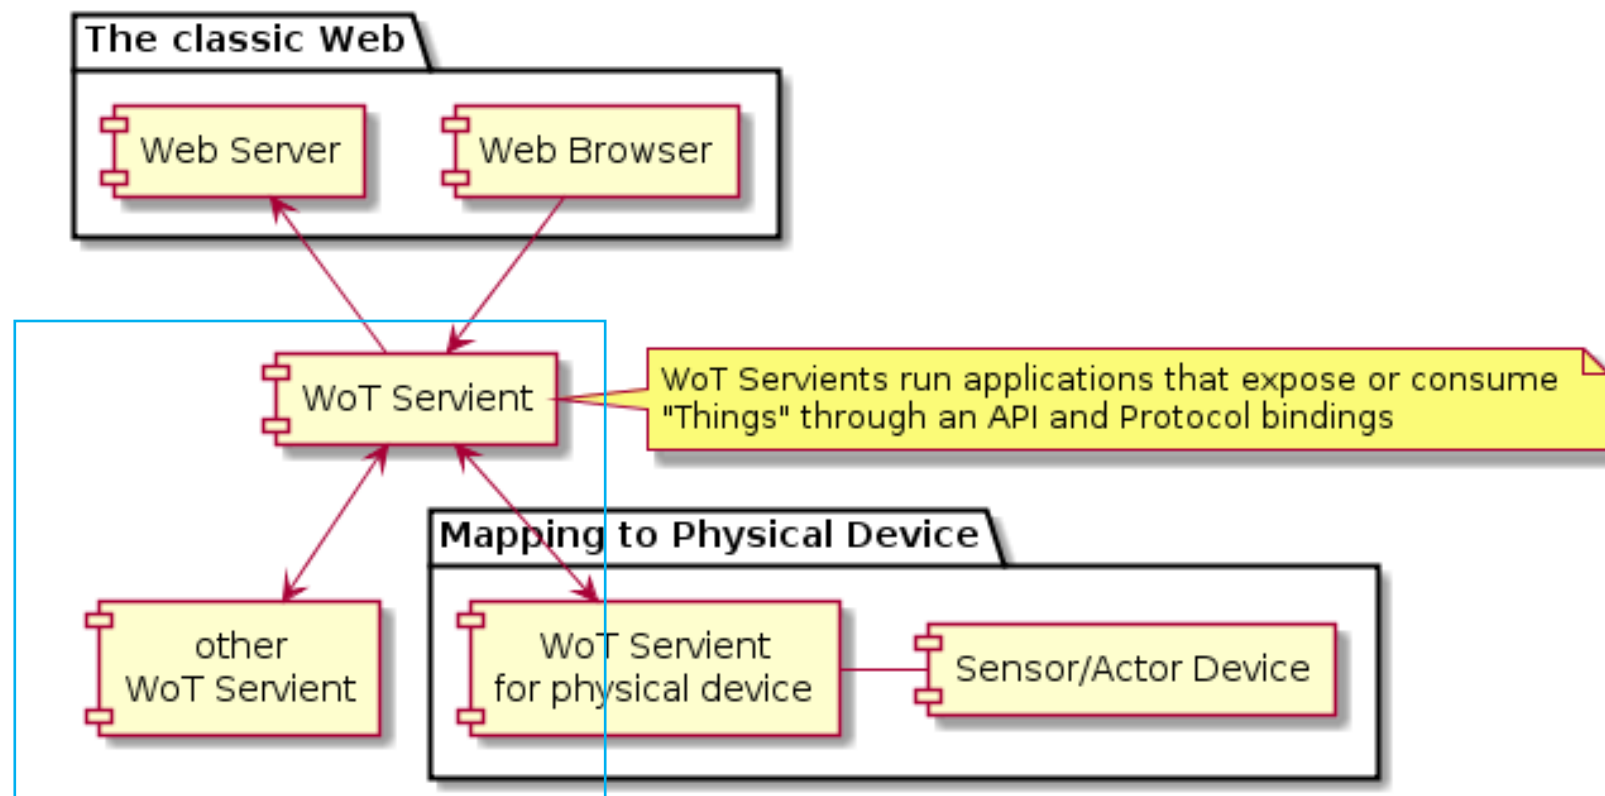

Client Side Scripting

Servient Side Scripting (related to Device Driver Approach?)

Real Things interacting via the Web ...

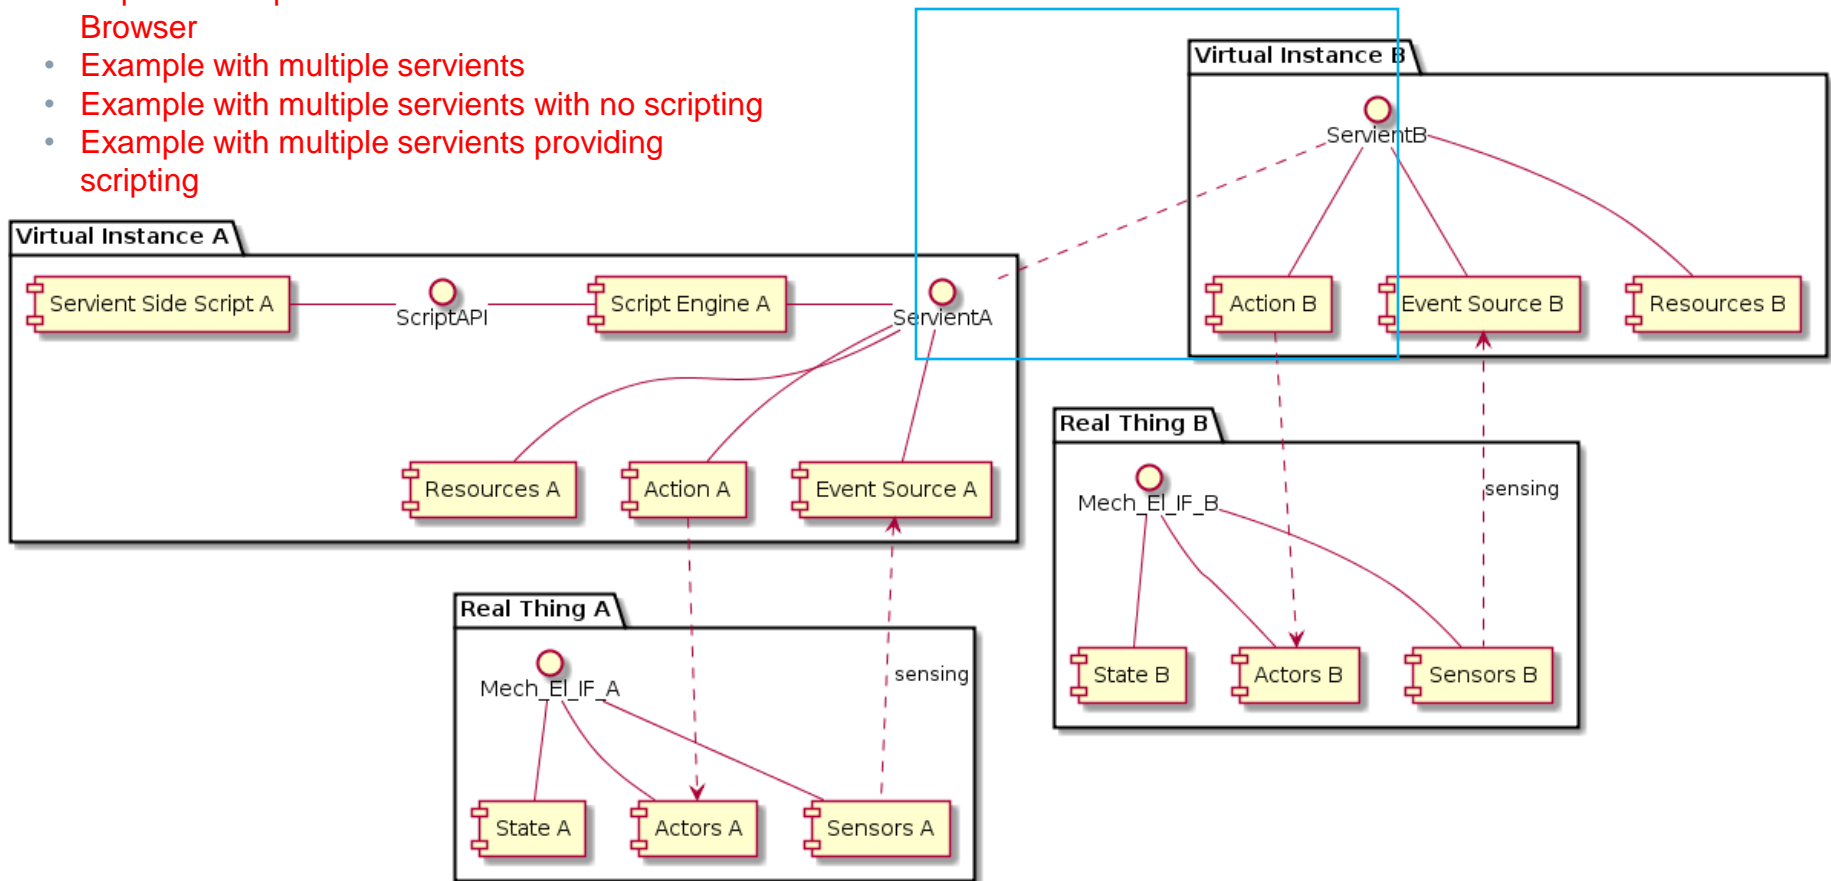

How do they interact via the web?

Real Things interacting via the Web ...

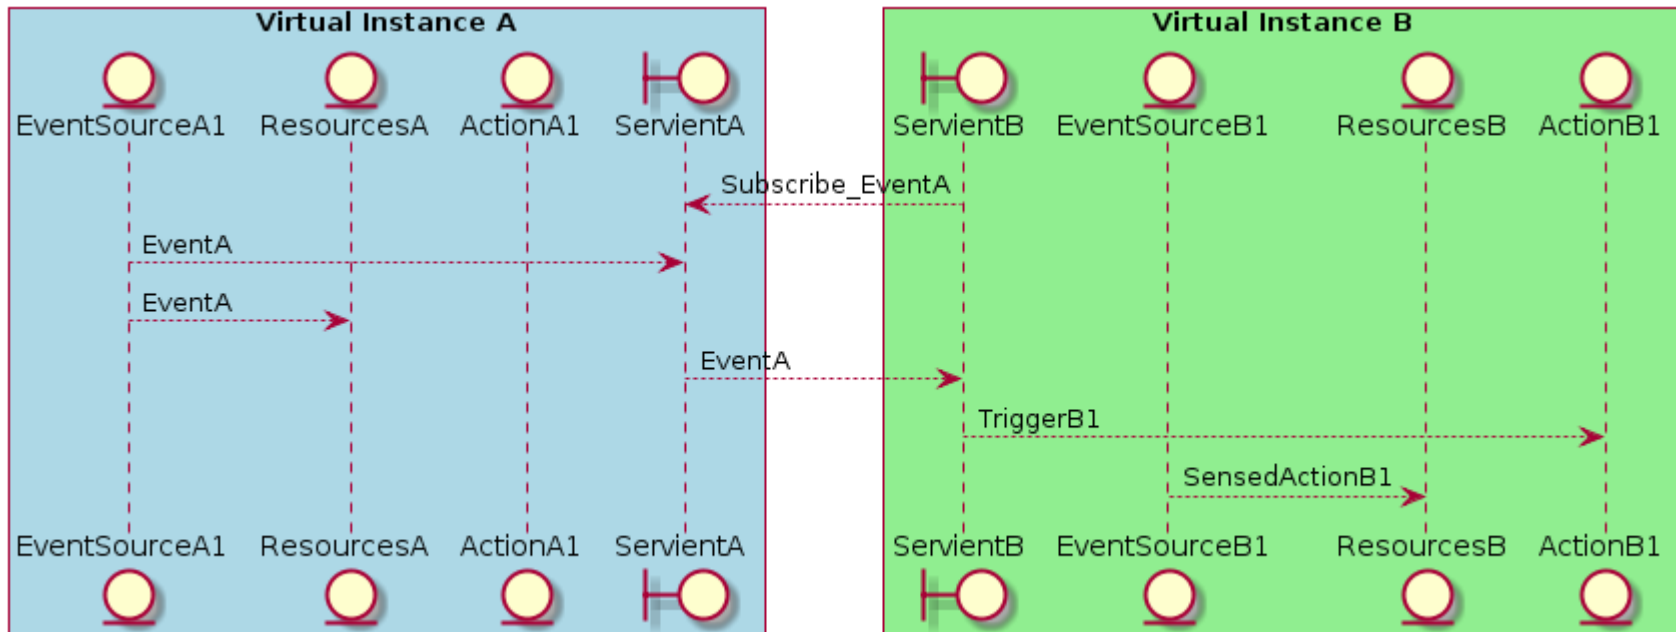

Needs further work, e.g.:

- Start simpler with servients not providing scripting
- Depict subscription of servient B with A via Browser
- Example with multiple servients
- Example with multiple servients with no scripting
- Example with multiple servients providing scripting

What interaction patterns are supported?

Real Things interacting via the Web ...

Needs further work:

- All events, actions are mirrored as resource
- To support late binding use pub/sub
- Subscribe_EventA of B is not necessarily sent by B
- Also enables proxies due to resource constraints of servients
- Instance/logic binding events to actions

Needs further work:

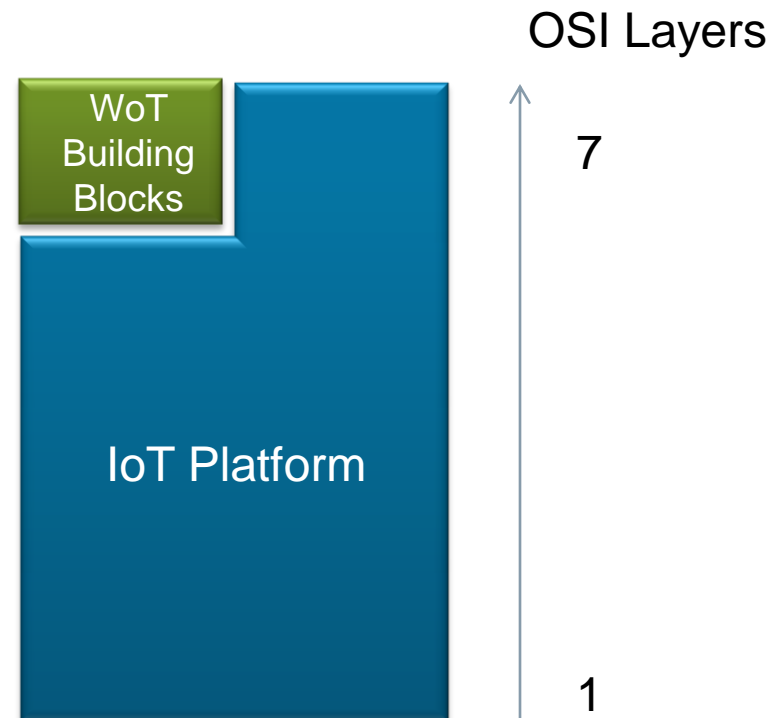

- Example: Mapping to concrete protocol
- ???

How does it relate to IOT ...

WoT Framework Building Blocks are intended to map to existing IoT platforms and protocols

Adoption of WoT Technologies allows for

- Integration of things in today's Web
- Web applications integrating things
- Integration of application domains by means of semantic web
