Annotation Use Case: Varying levels of access
(Annotations with Both Instructor and Student Roles Across Courses)

User	Permissions	Example
User 1	Group/Course A	Student from Course A
User 2	Group/Course B	Student from Course B
User 3	Group/Course A Group/Course B	Instructor for Course A and for Course B
User 4	Group/Course A	Student from Course A

Annotation 1: user 3, the instructor, creates the 1st annotation, which is relevant to both course A and B)
Annotation 2: user 1 from course A responds (annotates the 1st annotation)
Annotation 3: user 2 from course B responds (annotates the 1st annotation)
Annotation 4: user 1 from course A responds (adds an additional annotation on top of the annotation that same user created earlier)
Annotation 5: user 4 from course A responds to one of user 1's annotations (annotates the 4th annotation)
Annotation 6: user 3, the instructor, responds to user 2's annotation (annotates the 3rd annotation)

Summary:
- User 1 & 3 from course A are communicating amongst themselves about an annotation the instructor created.
- User 2 from course B is communicating with the instructor.
- Group A can't see group B's annotations and vice versa.
- The instructor can see everyone's annotations
- The instructor's annotations can only be seen if the instructor:
  - makes the initial annotation
  - annotates an annotation from another user who is in the same group/course.
