- UF – used for
- BT – broader terms
- NT – narrower terms
- RT – related terms
- SA – see also
- SN – scope notes
- NDC(9) – NDC (Nippon decimal Classification) term(s) related to the NDLSH term
- NDLC – NDLC (National Diet Library Classification) term(s) related to the NDLSH term

What is Yomi?

- A single Kanji character has several pronunciations in Japanese.
- Yomi indicates pronunciation information expressed in syllabic / phonetic characters (Hiragana, Katakana or Roman Alphabet).
- In the case of NDLSH, pronunciation information is expressed in Katakana.
- e.g. Kanji character “東” (means east) has two pronunciations “higashi” and “azuma”. Each of the pronunciation is expressed in three types of syllabic characters.
