**vertical-align**

**Value:** baseline | sub | super | top | text-top | middle | bottom | text-bottom | <percentage> | <length> | inherit  
**Initial:** baseline  
**Applies to:** inline-level and 'table-cell' elements  
**Inherited:** no  
**Percentages:** refer to the 'line-height' of the element itself  
**Media:** visual  
**Computed value:** for <percentage> and <length> the absolute length, otherwise as specified

This property affects the vertical positioning inside a line box of the boxes generated by an inline-level element.

**Note.** Values of this property have different meanings in the context of tables. Please consult the section on [table height algorithms](#) for details.

The following values only have meaning with respect to a parent inline element, or to the [strut](#) of a parent block container element.

In the following definitions, for inline non-replaced elements, the box used for alignment is the box whose height is the 'line-height' (containing the box's glyphs and the half-leading on each side, see [above](#)). For all other elements, the box used for alignment is the margin box.

**baseline**

Align the baseline of the box with the baseline of the parent box. If the box does not have a baseline, align the bottom margin edge with the parent's baseline.

**middle**

Align the vertical midpoint of the box with the baseline of the parent box plus half the x-height of the parent.

**sub**

Lower the baseline of the box to the proper position for subscripts of the parent's box. (This value has no effect on the font size of the element's text.)

**super**

Raise the baseline of the box to the proper position for superscripts of the parent's box. (This value has no effect on the font size of the element's text.)

**text-top**

Align the top of the box with the top of the parent's content area (see [10.6.1](#)).

**text-bottom**

Align the bottom of the box with the bottom of the parent's content area (see [10.6.1](#)).

**<percentage>**

Raise (positive value) or lower (negative value) the box by this distance (a percentage of the 'line-height' value). The value '0%' means the same as 'baseline'.

**<length>**

Raise (positive value) or lower (negative value) the box by this distance. The value '0cm' means the same as 'baseline'.

**top**

Align the top of the aligned subtree with the top of the line box.

**bottom**

Align the bottom of the aligned subtree with the bottom of the line box.

The baseline of an 'inline-table' is the baseline of the first row of the table.

The baseline of an 'inline-block' is the baseline of its last line box in the normal flow, unless it has either no in-flow line boxes or if its 'overflow' property has a computed value other than 'visible', in which case the baseline is the bottom margin edge.
