

(  ↓ > ) +  1 >> -!  /

So sorry Lisa and John I apologise for not getting this

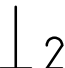

done more speedily.

> ..  

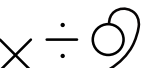

Here are some examples.

   \  < 

Question can you make a cup of tea?

   2 > \  < 

Question are you able to make a cup of tea?

/  ÷     ! > ? | -!  /

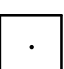

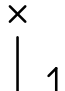

The second sentence is nearly correct because it did not use the

>>   >> / , , 

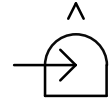

symbol for tin can for the verb that means be able

.. <    >  >

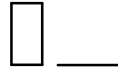

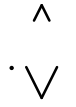

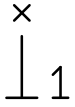

There will obviously be words that will need to be simplified to provide

   ÷  1  -!  \

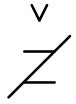

more support in some cases as we are not using Blissymbolics as a

generative language but rather like a pictographic system . I understand this

is because we need to be able to map against other symbol sets

such as ARASAAC, Mulberry, Jellow and other freely available symbol sets.
