

Attendees: Michel, Achille, Alasdair, Joachim, Kerstin, Scott, Serkan, Toshiaki

Introduced the notion of priority: MUST; SHOULD; MAY as per <http://tools.ietf.org/html/rfc2119>

From last call, we have now assigned the following priority levels

- MUST: type, title, description, created, creator
- SHOULD:
- MAY: identifier, short label, contributor,

Must

- License: dcterms:license

Should

- Homepage: dcat:landingPage implies that the dataset is typed as a dcat:Dataset; foaf:homepage is too strong due to it being inverse function; chosen to use foaf:page
- language: dcterms:language and point to lexvo Language vocabulary

May

- ShortName: Michel came back with dcterms:alternative and skos:prefLabel but neither capture the shortness aspect
- keyword: (In MAY due to the burden of adding it) Should link to a taxonomy of keywords but can use strings if need be; foaf:topic points to documents not the topic; Recommend the use of dcat:theme for URIs and dcat:keyword for strings
- rights: dcterms:rights (Some confusion as to the difference between license and rights. Anyone know of a good document that gives the distinction?)

Next week call: Monday 3 June usual time
