# 1. Pitch understanding

---

## 1.1 Our understanding of the overhaul stakes

10 years after having revamped its website, now judging it obsolete to support the expectations of the organization and meet the challenges of the future, the 25 year-old W3C wants to redesign and rearchitecture its website in order to :

- Clarify its role for its worldwide audiences and not only its members
- Fully restructure its value proposal around key content topics and missions
- Enhance the user experience with fluid journeys and a clear meta-navigation
- Strengthen the site technical foundations with the implementation of a new architecture
- Facilitate the membership through a new digital service stand
- Promote the crowdfunding participation
- And raise its awareness around the world thanks to a thorough brand activation and new digital identity consistency

To achieve these goals, W3C is looking for a true partner able to help him developing its new website in each steps of the designing and building roadmap.

1. Choosing a **new architecture** & working on a **content strategy**
2. Designing the new website, based on a **responsive webdesign**, with a **consistent brand identity** & an **easy navigation** into the W3C ecosystem
3. Setting up the **solution ready to be used** by W3C : in the respect of the fixed objectives, in particular the deadlines, quality, safety and costs
4. Delivering the **guidelines** to W3C teams for a complete autonomy and efficient spreading: installation, style guide, SEO and content

Important: the partnership established during the design and the set-up will continue in a long-term relationship: to advise on communication campaigns and on digital strategy, to help with new inputs, as well as technical support or new projects.

## 2. Our proposal

---

### 2.1 About Oonops

Oonops is a **digital agency, independent and cooperative, born 17 years ago**. It is led by 5 employee associates with complementary skills and know-how (all doers and thinkers) also relying on a **network of experienced partners** to accompany its clients.

The Oonops promise is to help companies and institutions to fully benefit from brand and business opportunities linked to digital development according to a humanist drive for innovation.

Oonops advocates a global approach of the digital transformation with an upstream business-oriented strategic consulting for the designing and building of digital ecosystems. The Agency also provides content strategies and communication plans.

Proximity, intelligence sharing, responsiveness and efficiency are the main features of Oonops' client posture.

### 2.2 Our assets to carry out the project

- Comprehensive team
- Experienced technical team on headless architecture
- Content expertise SEO-oriented
- Complex projects experience (in services, data and mixed decision-making modes) → iterative approach rewarded with numerous winning projects : VEOLIA (international) – PIARC (migration) – CESI (UX)
- Brand changes / Brand deployments / Brand management projects experience : new ID to reveal and implement, guidelines to share (Veolia - IDF Mobilités)
- Project with international dimension: front & backend design / contribution
- Different organizational types projects management (international, charity, public and private) with different decision-making modes
- Donations projects knowledge and know-how (CARE France – SNC)

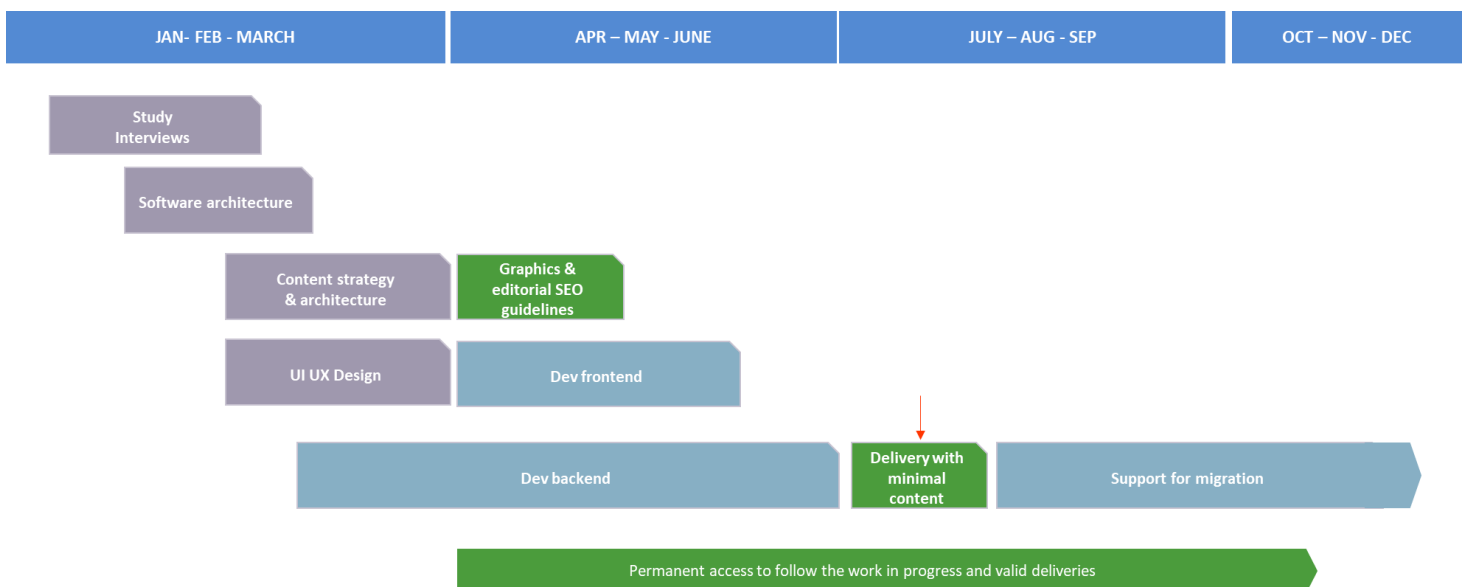

## 2.3 Our team to make your project a success

Our team to carry out the project is composed as follows: 1 main contact and 6 mission managers. They each have more than 15 years of experience and are recognized experts in their domain. They can at any time mobilize all the resources and expertise of the agency.

- **Commercial & production steering:** Isabelle JOUSSELIN - **Privileged interlocutor**
- **Brand content - consulting :** Philippe CHARTON and Sandrine GOBERT
- **Visual design & UX:** Magali QUINARD – Muriel MARCADE & team
- **Design:** specification & supervision for tests and quality : Francois MELLAN – Véronique LAPIERRE
- **Backend development& architecture:** Nicolas DEHORTER & team: devops / tests
- **DevFront:** Christophe ANDRIEU & team
- **Accessibility audit & quality :** Carsten MEYER & specific helps

*The privileged interlocutor is the unique interlocutor of the W3C for contractual issues and tracking requests. It ensures that all resources, expertises and means are implemented to ensure the good execution of the missions, projects and works entrusted by W3C to Oonops. She participates in steering meetings. She supports the W3C on all the needs, from the study to completion. She ensures the respect of the fixed objectives, in particular the deadlines, quality, safety, costs.*

## 2.4 Planning overview

## 2.5 Phase “Towards a new architecture”

**We must keep the following goals** while imagining the software architecture that will let W3C edit and deliver content on the Web:

- Reasonably simple edition,
- Future-proof documents and reusability,
- Extendable CMS,
- Clear path to migrate contents,
- Integrate existing W3C services,
- Performance and CDNs,
- Keep unforeseen evolutions as possibility.

**The key points outlined by W3C lead us to put forward the following architecture:**

- An API based headless CMS to edit, publish and organize documents, and designate items (routes and sections/blocks) to handle custom behaviors (forms, search engine, calendars, etc.).
- A front-end server backed By Symfony that will consume the published content, generate fully rendered HTML pages and embed the custom behaviors.
- A centralized data server that will gather the forms submitted, logs, etc. It could act as a proxy for a CRM
- Additional CMS could be added to provide dedicated edition capabilities for specific purposes (drafts and standards for example) and reincorporated under dedicated routes on the front-end server.

### Let's review the key benefits:

#### **Reasonably simple edition and future-proof documents**

A headless CMS is a tool designed to edit content and store it in a structured, reusable way (JSON). An API based head CMS lets us request and consume the content at will, outside the editing framework.

#### **Extendable CMS**

Assuming we choose the right one, a headless CMS can be customized by adding available contents. How these new behaviors are handled is the responsibility of the front-end server (Symfony development not tied to the CMS).

#### **Clear path to migrate contents and integrate existing W3C services**

For each type of document designated by W3C, migrating becomes a task of writing a converter to JSON and the adding the result to the CMS, with the right routes and taxonomy. For functionalities, it is either rewriting it in Symfony or reusing what has been written by the Systems Team.

## **Performance and CDNs**

Having a front-end server independent of the content editing lets us concentrate on delivering the pages without having to worry about the framework. Basically, the HTML templates are what you get at the end.

Moreover, the front-end server can be replicated on a CDN service to give consistent speeds around the world.

As an added benefit, having the content in a structured format readily accessible could simplify a future deployment of a search engine. The documents could directly be indexed from the API ( if they are public, proxied if not), without having to be extracted/parsed/prepared.

### **To choose the new CMS, the following points will have to be considered:**

- API based
- Migration
- Multilingual docs
- Extensible content types
- Custom authentication / authorizations

### **This phase is organized in few steps :**

- Workshop 1 : goals, benefits, risks
- Analysis
- CMS and architecture proposal
- Workshop 2 : demo - q&a
- Final proposal detailed
- Validation
- Manual to prepare environment (Cloud) / installation / servers

### **Then the design will have to cover:**

- Detailed specifications : fonctionnalités & editorial content layout
  - Types of content (for edition)
  - forms
  - translation (languages)
- Meta : non automatic / automatic
- Access rights
- Previsualization (simplified / templates)
- Data treatment - interfaces

**During the Solution set up we will give to W3C team a permanent access to our environment in order to follow the work in progress and test the deliveries. Validation meetings will be held throughout the phase.**

1. Front

- Development of templates. HTML5. WCAG 2.1. (See further in this document)

2. Back

- Development and setup: content editing - templates integration – API Content consumption– data treatment

3. Delivery

- Instructions for installation / servers
- Instructions for migration
- Installation by W3C on pre-production environment (for tests)
- Installation by W3C on pre-production environment (for tests)

4. Support during installation

5. During the migration: our team will be available “on demand”.  
See annexe : “maintenance on demand”

## 2.6 Phase “elaborate the content strategy”

In order to answer to W3C awareness and performance goals, the implementation of a global and operational content strategy will constitute a major force to capture the key audiences attention and engagement.

Among the main objectives linked to the editorial work, 3 essential achievements are to fulfill :

- Position the W3C website according to prior corporate and business goals
- Embody the global brand universe of the W3C
- Engage in a powerful relationship with key audiences

The current website does not allow to easily reach W3C assets.

On the one hand, we highlight in particular that :

- The W3C website value proposal suffers from a lack of content strategy which leads to an overall exploded architecture
- Contents are not parts of a global and consistent digital brand ecosystem
- Brand identity codes and web browsing principles are not unified
- The W3C digital presence is significant but not focused on user needs

On the other hand, the W3C website must be designed to address different priority audiences :

- Web developers & designers
- C-levels decision makers
- W3C members
- W3C groups
- Business development

In order to answer to specific objectives :

- Increase relevance and visibility, generate more interest in W3C work
- Increase participation and feedback (ext and internal)
- Drive membership

Different working fields have been identified by your team regarding the content strategy approach :

- To meet the expectations of all targets
- To clarify the W3C project presentation
- To simplify the sitemap
- To simplify the digital ecosystem journeys
- To create public adhesion to the W3C project

To meet these goals, Oonops suggests a collaborative methodology under the governance of a dedicated content steering committee:

1. Review the strategic objectives and prioritize them
2. Identify the digital brand platform drivers
3. Undertake a macro study of the W3C website corpus
4. Conduct a key audiences mapping
5. Proceed to an editorial zoom (formats, time releases, call to actions)
6. Set a content stock: layout / templates
7. Define editorial guidelines and animation processes: SEO focus, editorial programming
8. Monitor performance dashboards (including quality, consumption and actions indicators)

During the content strategy phase, co-construction will be favoured and all content roles will be specified from the project management to the production, planning, writing, webmastering and promoting tasks.

**Focus on specific steps and deliverables** adjusted for the short 6 month period :

1. Meet and interview the W3C team
2. To complete the initial study : do interviews with the 5 key targeted audiences (5x5 Itws)
3. Draw up a summary of expectations and opportunities
4. Write the first recommendations : brand platform, positioning, primary levels site map, SEO
5. Create the targeted sitemap
6. Work on the current sitemap to set entries and link-ups (current system => target system)
7. Create each editorial template => for headless
8. Build editorial & SEO guidelines

*Note : 4 workshops will be animated during the first quarter.*

**Benefits sought: more impact and influence through better content consistency and performance**

## 2.7 Phase « new digital branding & style guide »

Oonops believes in 7 redesign fundamental principles:

- A consistent and attractive brand experience
- An easy and comfortable navigation, for everyone, on any devices
- A design & meta navigation to embrace to complete ecosystem
- User Interface designed for a each audience
- Cross-cultural ID codes for worldwide publics

The new interfaces will be designed according to the following points:

- The headless solution option
- Compliancy with AA or AAA level
- SEO recommendation
- Editorial needs (specification)

The deliverables step by step :

1. Style proposition
2. Graphics templates & layout => desktop and mobile – lot 1 (home page / standard)
3. Graphics templates & layout => desktop and mobile – lot 2 (home page / standard)
4. Graphics templates & layout => desktop and mobile – lot 3 (home page / standard)
5. HTML development => RWD – lot 1 (structure)
6. HTML development => RWD – lot 2 (templates 8 – see annexe : estimation )
7. HTML development => RWD – lot 3 (templates 8 - see annexe : estimation)

We will deliver also:

8. Digital identity guidelines: 10 pages documents
9. Style guide : HTML
10. Layout manual recommendation (linked to editorial and SEO recommendation)

*Note : 5 workshops will be animated during the two firsts quarters.*

## 2.8 Accessibility & quality, throughout the project

We propose to provide a quality validation and accessibility validation to each step and phase of the project, including post-migration. For that, we will rely on the quality manager and on our accessibility manager.

For the accessibility, the key points of intervention are :

1. New visual and style design
  - validation / ajustment
2. Graphic templates RWD
  - validation / ajustment
3. Integration HTML / models RWD
  - tests devices
  - validation / Tests WAI / ajustment
4. Back
5. New content edition
  - validation / ajustment on system
6. Installation by W3C
  - tests before migration
7. Migration contents by W3C
  - tests
  - Mise en page / ajustement édito
  - Validation
  - Ajustment on system (if needed)

## 2.9 After the set up

Our team attaches great importance to the follow-up of the projects implemented and the relationship with its customers.

**Here is also a list of the topics** that could be dealt with later:

### **Offer deliverables: Strategy & digital transformation**

- Study and consulting mission: digital strategy
- Study and consulting mission: customer relationships
- Team training
- Leaders coaching
- Communication plan
- Change management

### **Offer deliverables: Brand & Content**

- Branding mission
- Content & editorial strategy
- SEO - strategy and optimization
- Editorial animation
- Writing design
- Multimedia content (video, app)
- Audiovisual production
- Visual identity
- Digital graphic charter and style guide
- Webmastering

### **Offer deliverables: Innovation & developments**

- Requirements Expression Document - AMOA
- General specifications - AMOA
- Detailed functional and technical specifications
- Creation of interfaces (UI)
- Custom web application, API
- Database
- Custom site
- Accessible sites
- Multi-site solution
- Search engine
- Data visualization - Cartography
- User tests
- Performance audit

## 4. More about Oonops

---

### 4.1 Focus on 4 references

Please do not hesitate to ask the contact of the vendor for each projet.

**CESI** <https://www.cesi.fr/>

- Strategic recommendations validated by the Management Committee, resulting from interviews and workshops involving CESI teams.
- A user-centric design with a "UX approach": prototyping key milestones, waves of user tests, restitution of test sessions and improvement of the prototype.
- A delivery of the key elements for the developments: mockup, functional specifications and delivery of HTML templates.
- Deployment assistance: advice, technical audits, recipes for developments, support for editorial framing, change management.
- Multi-disciplinary team work

## Ile-de-France Mobilités

- Consulting strategy & content strategy: how to become the “brand” everyday life for Parisian travelers ; How Île-de-France Mobilités could optimize its digital presence and provide information that makes daily life easier for travelers?

## Ile-de-France Mobilités & PAM <https://www.pam78-92.iledefrance-mobilites.fr/>

- Multi-sites solution
- Decentralized and multidisciplinary team work
- Accessibility AA
- CMS retained: Drupal 8.

**Île-de-France Mobilités** organise, coordonne et finance, les transports publics de voyageurs en Île-de-France. Le PAM 78 - 92 est un service de transport public collectif à la demande, d'adresse à adresse, destiné aux personnes à mobilité réduite domiciliées dans les Yvelines ou les Hauts-de-Seine.

2018

PIARC <https://www.piarc.org/>

**0.**

L'Association mondiale de la Route, créée en 1909, a pour objectif de promouvoir la coopération internationale dans le domaine de la route et du transport routier. En 2018, l'Association compte 122 pays membres, dans toutes les régions du monde, reflétant tous les niveaux de développement économique. Elle rassemble aussi des membres personnels et des organismes publics ou privés.

DEPUIS 2002

[routesroadsmag.piarc.org](https://routesroadsmag.piarc.org)

- Front office and back office separated.
- Headless custom
- Big data project
- Durability of the solution.
- Change of front office with several times in RWD.
- Data migration experiences.

**SNC** : <https://snc.asso.fr/>

- Based on headless architecture (headless CMS custom)
- Connected to a donation solution

**Solidarités Nouvelles face au Chômage (SNC)** est un acteur associatif majeur dans le champ de la solidarité, créé il y a 30 ans. Parce que le chômage isole, l'association offre une méthode d'accompagnement personnalisé aux demandeurs d'emploi et finance des emplois solidaires dans l'Economie sociale et solidaire. SNC intervient également dans le débat public pour défendre les intérêts des chercheurs d'emploi.

DEPUIS 2016

[www.snc.asso.fr](http://www.snc.asso.fr)

**CARE FRANCE** : <https://www.carefrance.org/>

→ Based on headless architecture (headless CMS custom)

→ Connected to a donation solution (external)

 CARE est un réseau de solidarité internationale, qui regroupe 14 associations nationales travaillant ensemble à la mise en œuvre de près de 1000 projets d'urgence et de développement. Sa mission : lutter contre la pauvreté et de contribuer à un accès universel aux droits élémentaires.

DEPUIS 2014

[carefrance.org](https://www.carefrance.org/)

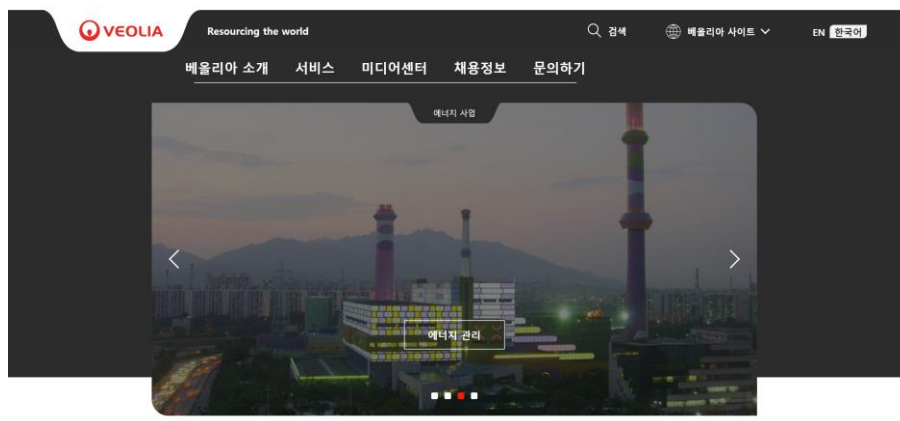

## AXA

In 2003 AXA chose Oonops to build its corporate website [axa.com](http://axa.com): our proposal an accessible website, design according to W3C standards, based on a secure solution, with CMS easy to manipulate for many contributors.

- Durability of a headless custom solution to manage [www.axa.com](http://www.axa.com) from 2004 to 2015
- Based on WCAG
- Security
- Change of frontend with several times.

## VEOLIA WATER TECHNOLOGIES

- Multi-websites solution based on headless architecture (headless CMS custom)
- Change of styles and frontend with several times – last one was for RWD
- Data migration expériences
- Style guides spreading & practice to use CMS all over the world
- Contact on demand.
