Our recommendation and assumptions

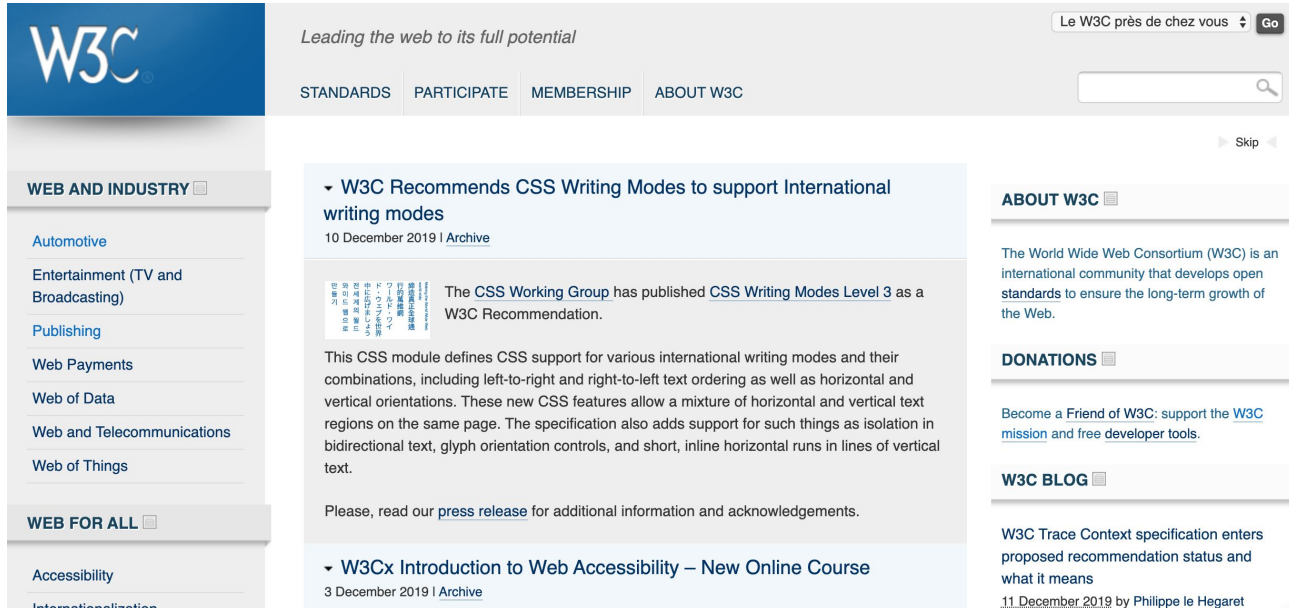

Background

The site is a good tool for active members and potential new members...

...but it is difficult to navigate there...

...with a lot of unsorted content...

... and with an outdated and unresponsive design.

The screenshot shows the W3C website with a blue header and a navigation menu. The main content area features a list of articles, including one about CSS Writing Modes. The layout is cluttered with multiple columns and unsorted content, illustrating the navigation difficulties mentioned in the text above.

▼ **W3C Recommends CSS Writing Modes to support International writing modes**
10 December 2019 | Archive

 The CSS Working Group has published [CSS Writing Modes Level 3](#) as a W3C Recommendation.

This CSS module defines CSS support for various international writing modes and their combinations, including left-to-right and right-to-left text ordering as well as horizontal and vertical orientations. These new CSS features allow a mixture of horizontal and vertical text regions on the same page. The specification also adds support for such things as isolation in bidirectional text, glyph orientation controls, and short, inline horizontal runs in lines of vertical text.

Please, read our [press release](#) for additional information and acknowledgements.

W3C Trace Context specification enters proposed recommendation status and what it means
11 December 2019 by Philippe le Hegaret

Goals

- Increase the impact of the brand and increase engagement and funding
- Facilitate navigation and content search. Design responsive: mobile first
- A site that complies with the various recommendations and standards : WCAG 2.1, W3C URI Persistence policy, OWASP standard,...
- Simpler and robust editing/maintenance
- Implement the new site by phase with graphic consistency

Our proposal in few words

January

Work on
Re-structuring
information and W3C
community needs
assessment

Proposal of several
design tracks to the
W3C and
management of
returns

Design of the
contribution workflow
and content validation

March

Include the W3C community in the design phase to define the project foundation

JAM Stack
approach

- WCAG 2.1 **AA+** minimum
- OWASP and web standard

Responsive
Simple
Robust

April

December

Develop by certified experts and involve in the community to ensure the sustainability of the project

Why US !

Full Service agency

- UX and Front division
- Ability to support the communication and content strategy
- Multidisciplinary technical expertise on CMS Project
- DevOps and Support divisions

Expertise and involvement in WEB standards

Clever Age has been involved for years in the accessibility, quality and implementation of WEB standards.

CMS Experts

We have worked on many CMS projects related to **digital transformation**, in consulting, implementation and support.

Agnostic and experts

Our complete **independence** from editors guarantees you advises based on the right solutions for **your specific needs**

We build your digital future for flexibility and growth !

Why us?

Our Vision of Your Project

Clever Age

Our involvement in the web community

Our expertise & references

Our proposition

UX/UI approach

Recommendations and assumptions

Our UX approach

UX design is the meeting point
of 3 disciplines

- **Design**
- **Technology**
- **Human factor**

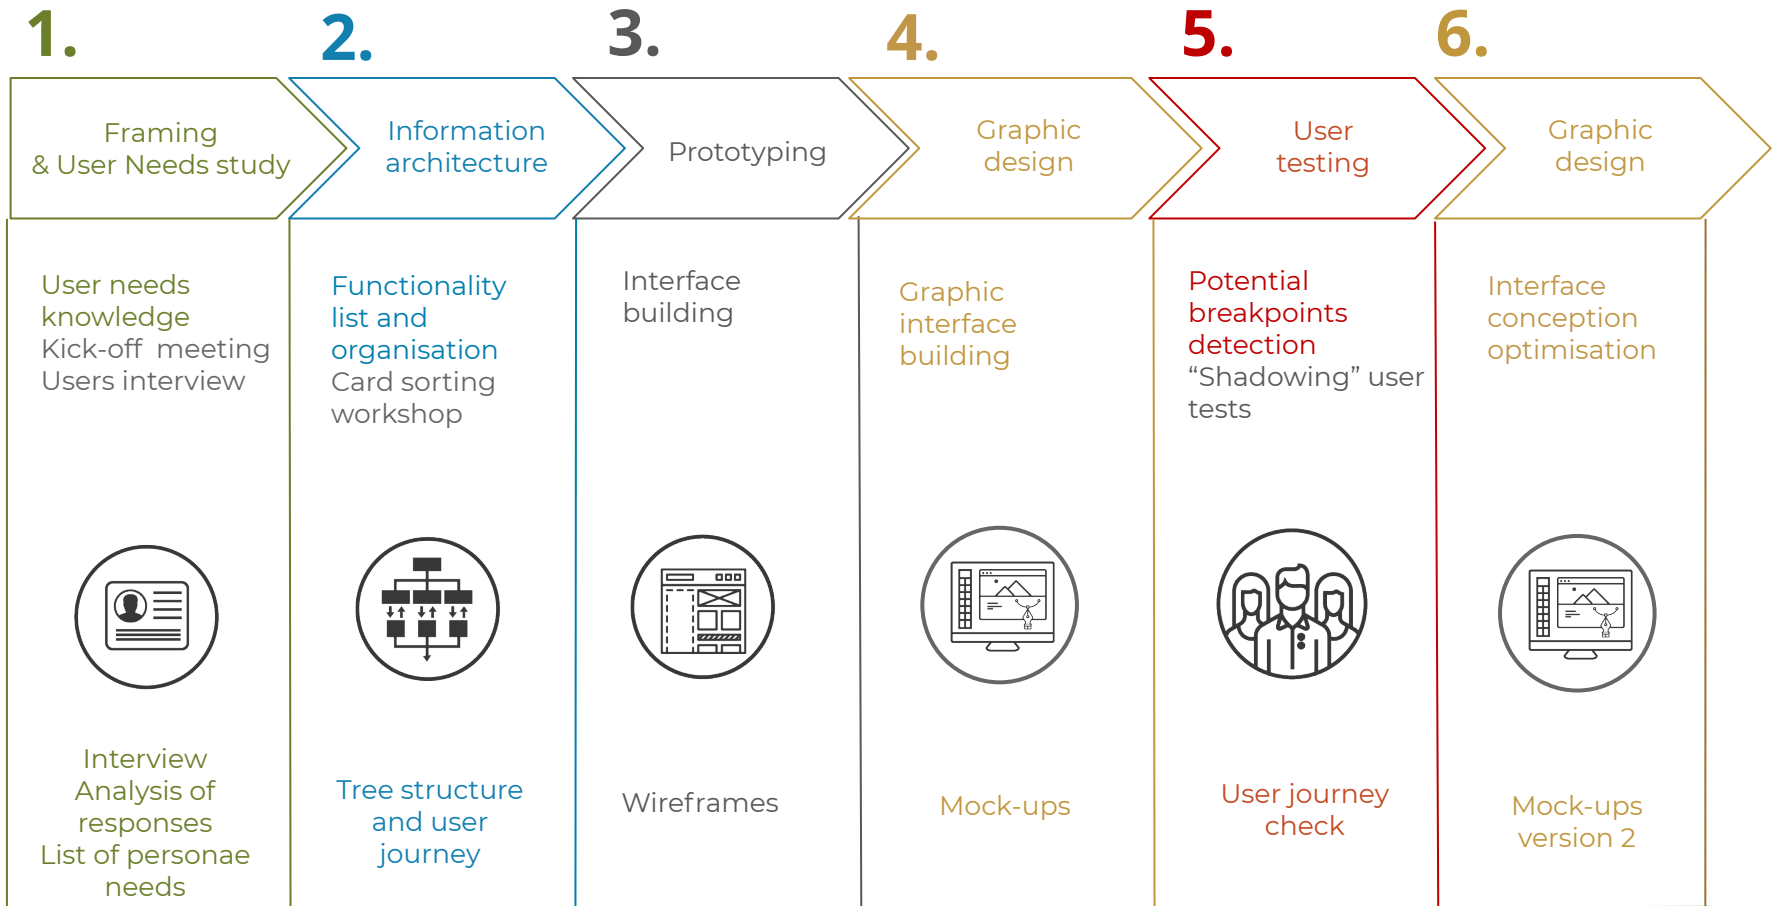

UX approach adapted to your project

Why ?

- Resolve the user tension by offering a solution meeting the users needs.
- User conception is the most strategic phase
 - A large number of conception choices are facilitated and made relevant with this upstream work of user experience conception.
- UX oriented project is a great opportunity for the project :
 - Time spent upstream to save time during the project
 - Reduce errors
 - Increase productivity
 - Reduce users frustrations
 - Improve the user journey

**Precisely identify problems to be solved & potential improvements,
then deploy the most suitable solution**

UX phases

Our recommendation and assumptions

Drupal CMS - Core Concepts

- Main modules :
 - The **Views** module allows you to display Drupal content, filter it by context, reformat it, and many options
 - The **Web Services** module allows the creation and native security of web services to access Drupal content
 - The **Layouts** module allows you to define several page architectures for the same theme, allowing for a flexible and varied design.
 - The **Multilingual** module - also known by the community as i18n - allows the complete translation of the CMS and its content
- CMS fully HTML5 compatible and native management of mobile and tablet display (joint use of HTML5 and Layouts)

Content modelisation in Drupal

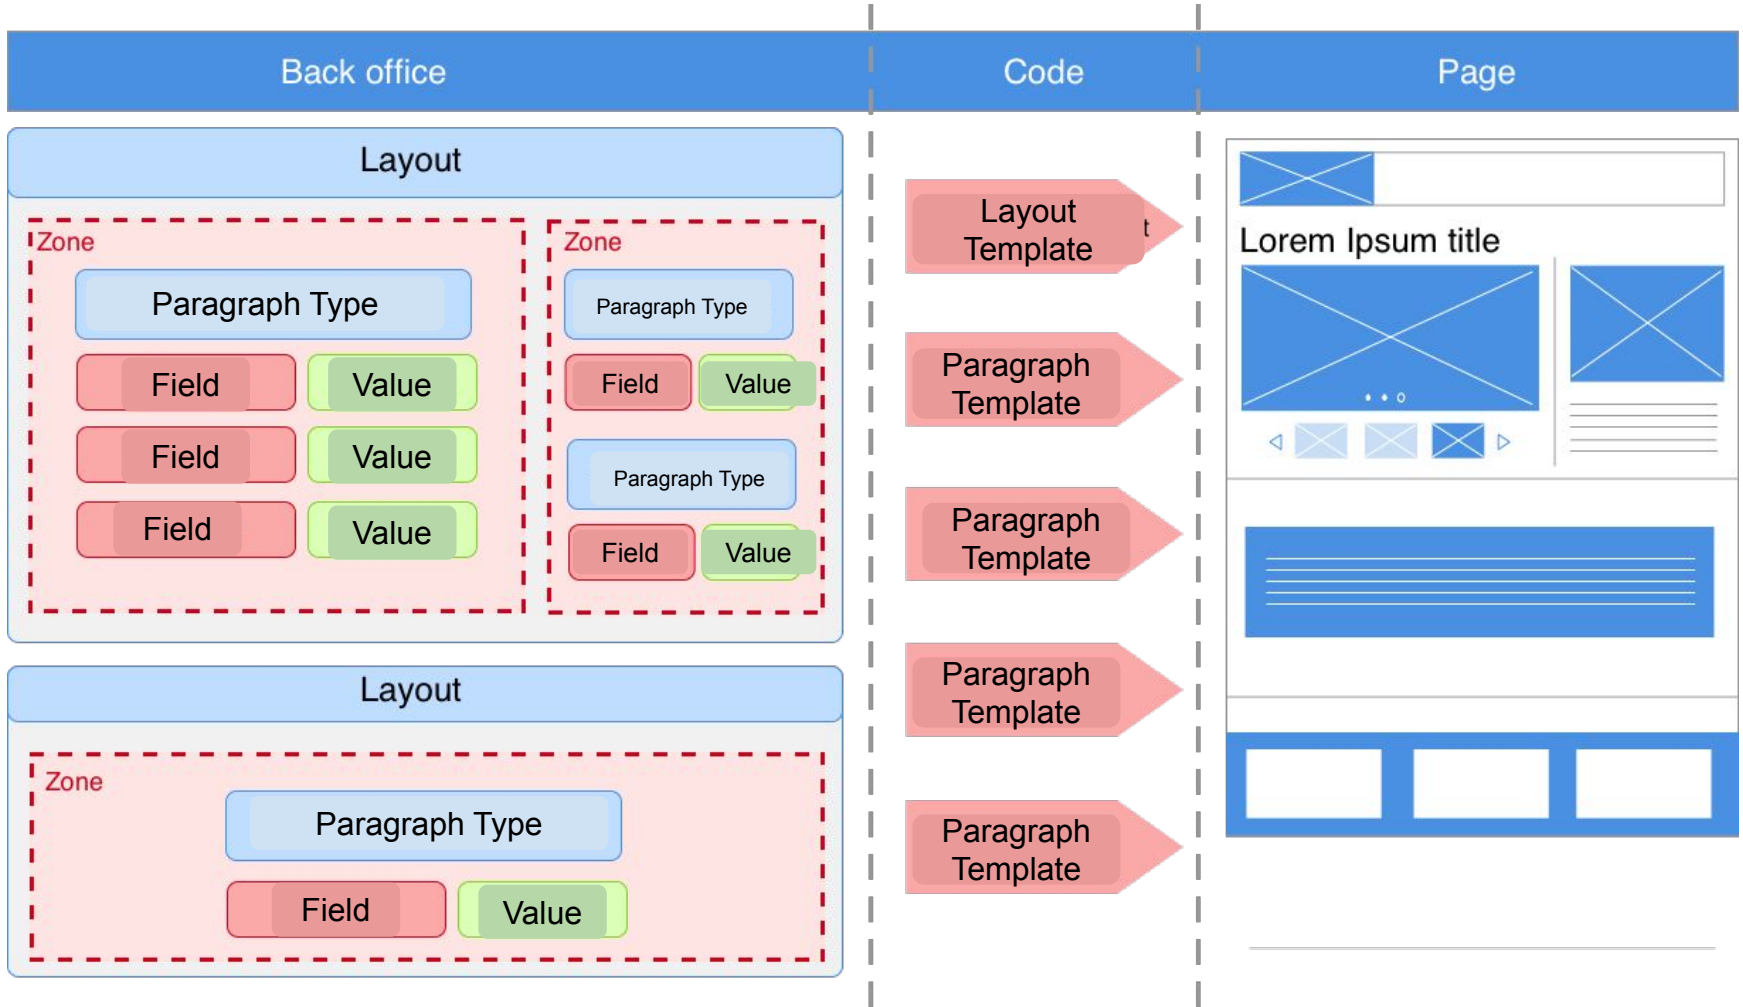

With Paragraphs

■ Not editable
 ■ Choice from predefined list
 ■ User contributed

Layouts modelisation in Drupal

With Paragraphs & Layouts

■ Not editable
 ■ Choice from predefined list
 ■ User contributed

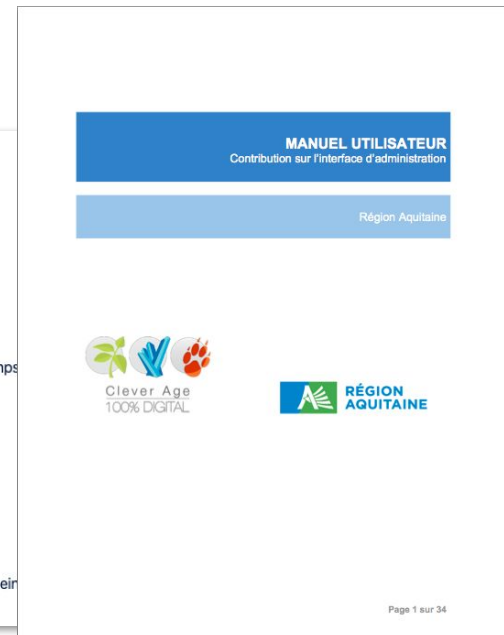

User Guide

- As part of the project, we will provide a **Drupal User Guide** (in english language) that will explain :
 - Drupal core concepts
 - W3C specificities and the ways of doing in your context

W3C Teams will be completely independent to run & contribute the content.

The screenshot shows a Drupal user guide page. On the left is a navigation menu with a dropdown arrow, containing a search bar labeled 'Doc RD8' and a list of items under 'Guides d'utilisation': 'Introduction à Drupal 8', 'Types de contenu', 'Créer du contenu', 'Menus', 'Paragraphes', 'Taxonomie', 'Formats d'image', 'Syntaxe Markdown', and 'Icones disponibles'. The main content area is titled 'Doc RD8 / Guides d'utilisation' and features a lock icon. The main heading is 'Introduction à Drupal 8'. Below it, it says 'Créé par Pierre Guézennec' and 'Dernière mise à jour le sept. 07, 2018'. The next section is 'Types de contenu', followed by the text 'Drupal est un gestionnaire de contenus. Un type de contenu est défini par un identifiant, un titre et tout une série de champs'. Under 'Exemples', there are three bullet points: 'Un article défini par un titre, une date, un contenu textuel, une image de couverture et des liens.', 'Une photo définie par un titre, une liste de personnes représentée et une image.', and 'Un évènement défini par un titre, une date, un lieu et une description.'. The final section is 'Champs', with the text 'Les champs définissent un contenu et peuvent être de plusieurs types et représentés par plusieurs types de widgets au sein'. A single bullet point follows: 'Un titre, via un champ texte ;'.

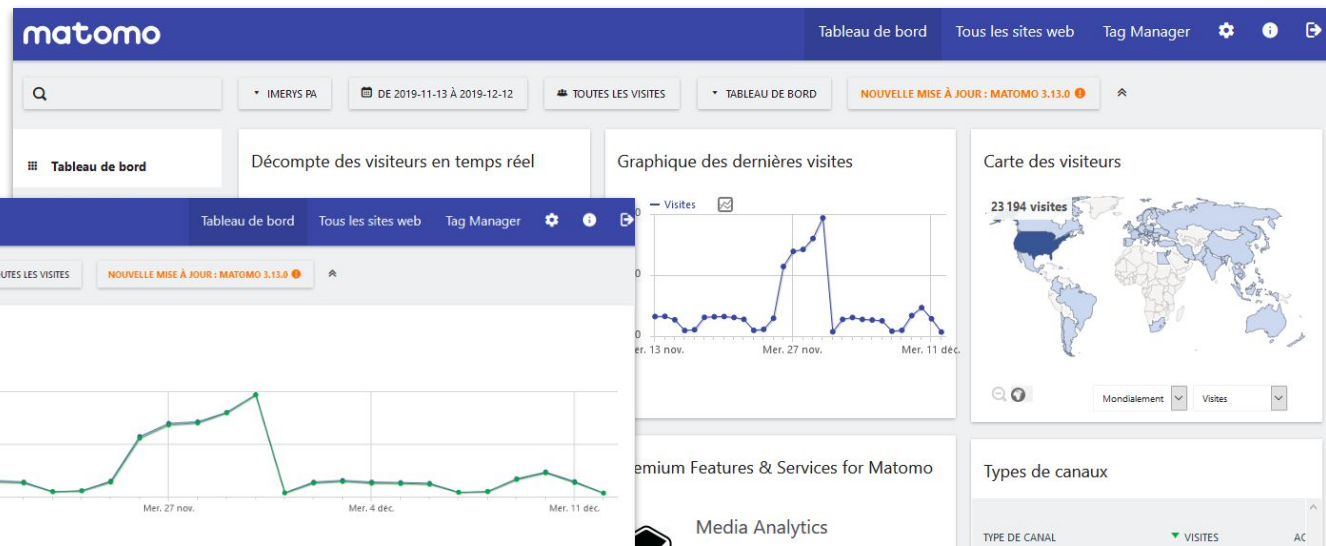

The cover of the user manual is displayed. It features a blue header with the text 'MANUEL UTILISATEUR' and 'Contribution sur l'interface d'administration'. Below this, a light blue bar contains the text 'Région Aquitaine'. The cover also includes the 'Clever Age 100% DIGITAL' logo and the 'RÉGION AQUITAINE' logo. At the bottom right, it indicates 'Page 1 sur 34'.

Illustrations of User Guides

Focus on Search Engine Optimization

As part of the project, a SEO expert will take care of the following :

- Recommendations on Wireframes & Design
- Establish a SEO plan for the migration, with the focus on not losing the existing SEO score for the W3.org website
- Organize the URL redirections plan with the W3C Team
- Will help W3C Team on setting-up a Matomo Dashboard

The keys to an accessibility approach

The three pillars

The compliance of the W3C site with international accessibility recommendations (WCAG) must be based on the following three pillars:

1. increase in team competence;
2. audit and support;
3. update of the internal workflow.

Increase in team competence

All teams working on the W3C Web project must develop accessibility skills with training content adapted to their profiles:

1. overall awareness of accessibility for each stakeholder
2. increase in competence of each participant according to his profile :
 - Decision maker / project manager;
 - UI / UX ;
 - front / back developer;
 - contributor.

Audit - evaluation method

As relevance tests require human expertise, we use the WCAG-EM 1.0 methodology (WCAG Evaluation Methodology) :

- **Define the scope of the audit:** scope of the audit, objective of the evaluation and level of compliance to be respected ;
- **Explore the website:** identify common pages, representative pages, website specific pages and features, content typologies ;
- **Select a representative sample** in accordance with the project team in charge of the project ;
- **Audit** the selected sample ;
- **Write an audit** report.

Update of the internal workflow

Accessibility must be seen as a continuous improvement process, it does not stop at a T moment and must be maintained over time.

Before each phase :

- accessibility recommendations for the profile concerned
- awareness / training / skills development.

Downstream of each phase:

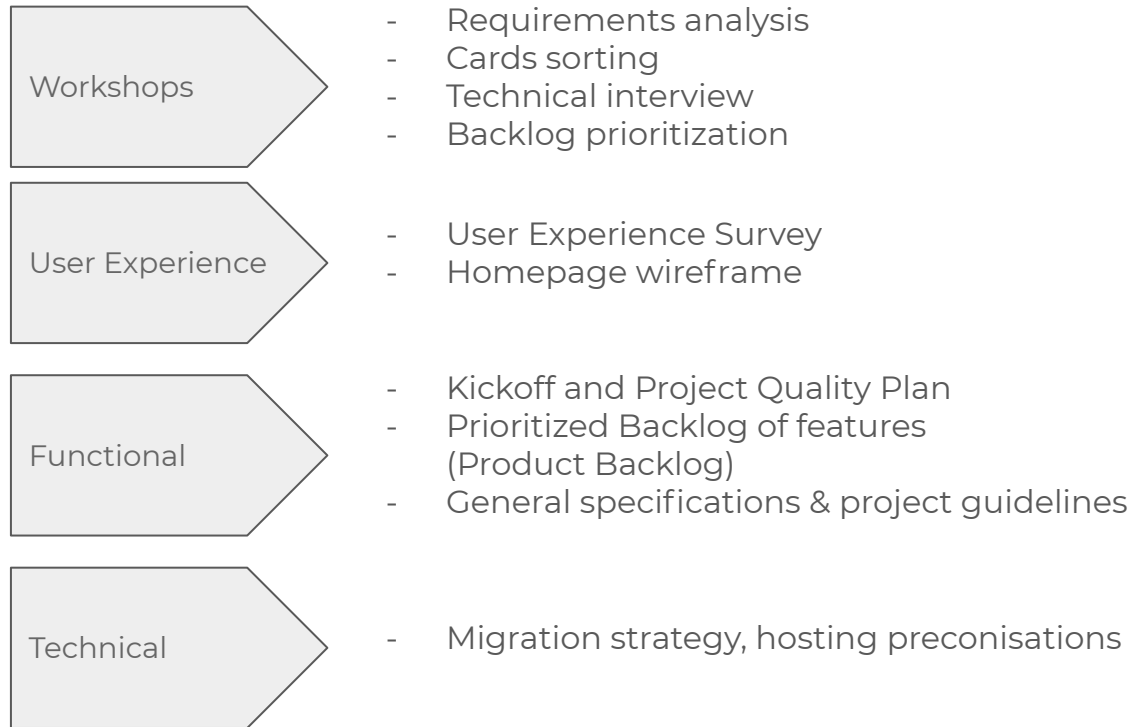

- verification via manual and/or automatic audit:
- feedback / corrections et arbitrages.

3

Focus on the **Design Stage**

This stage will include the following steps and deliverables :

- This stage is made of **4 workshops**, in collaboration with W3C Teams
- This stage allows to validate the project Roadmap, both from planning, UX, functional and technical choices and orientations point of views

Focus on the **Build Stage**

This stage will be divided in multiple Sprints, inspired of Agile Methodology

The number of sprints will be defined depending on the project Roadmap validation, the financial limit allowed for the project, and the features prioritized in the Product Backlog

Focus on the **Build Stage**

Communication and sharing are the **keys of a project success.**

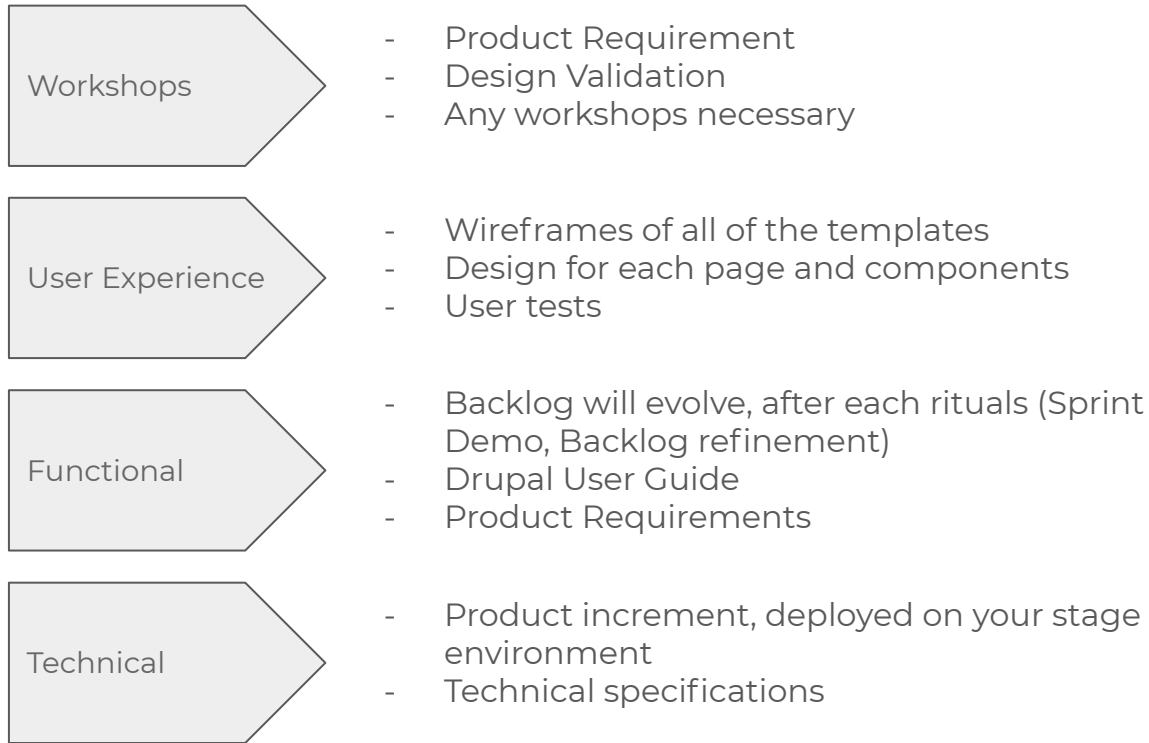

We will set-up these meetings :

- **Daily meeting**
 - **What for ?** share actions, answer questions
 - **When ?** daily
 - **How long ?** 15 minutes
 - **Who ?** Development team
- **Project Comittee**
 - **What for ?** share evolution, planning update, risks follow-up
 - **When ?** Every week
 - **How long ?** 1h
 - **Who ?** W3C and Clever Age Project Managers
- **Steering Comittee**
 - **What for ?** share project planning, make decisions, financial follow-up
 - **When ?** Every two month
 - **How long ?** 2h
 - **Who ?** Project direction, W3C and Clever Age Project Managers

Focus on the **Build Stage**

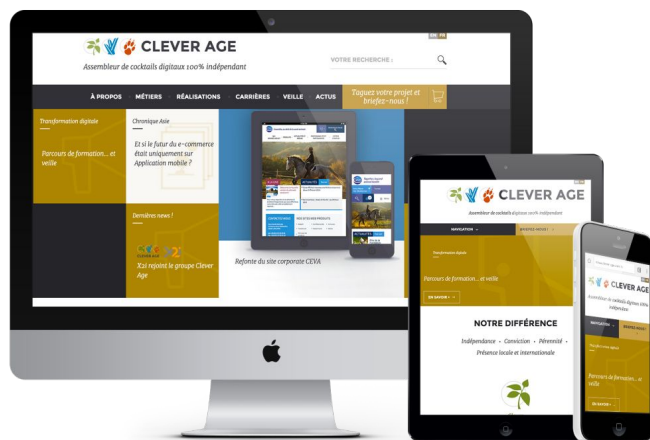

Deliverables will include :

Let's keep in touch !
