ISSUE:

Should Portable Choreography message content be extended to include other items such as SOAP headers, security, etc., or should this be included in the Channel?

PROPOSAL:

For transport (e.g. anything SOAP-specific), we should neither include it in the message content or in the Channel. However, we should include QoS policies, including the following:
- Security
- Coordination
- ReliableMessaging

Section 2.4.2 of the CDL specification describes Channel Variables as follows:
"A Channel Variable could contain information such as the URL to which the message could be sent, the policies that are to be applied, such as security, whether or not reliable messaging is to be used," Given how a Channel is defined, it is reasonable to use Channel Variables to capture QoS policies.

ACTION:

I will follow up this proposal with an example in CDL of these QoS policies.
