

Proposal for Issue  
[http://www.w3.org/Bugs/Public/show\\_bug.cgi?id=6429](http://www.w3.org/Bugs/Public/show_bug.cgi?id=6429)  
depends on  
[http://www.w3.org/Bugs/Public/show\\_bug.cgi?id=6428](http://www.w3.org/Bugs/Public/show_bug.cgi?id=6428)

WS-Eventing section 1.2 discusses two delivery formats: unwrapped and wrapped, but it does not specify a standard WSDL for wrapped event delivery. As the result, an Event Source has to assemble different event notification messages with different wrapper element, thus negating the benefit of a standard wrapped event delivery format.

To address this issue, we propose to define a WSDL for the standard wrapped mode. Since there is a need to dispatch the event wrapped inside the standard element, we added an attribute actionURI to convey the wsa:Action associated with the event operation. As the result, the wired SOAP event delivery message looks like this:

```
<s12:Envelope
  xmlns:s12="http://www.w3.org/2003/05/soap-envelope"
  xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing"
  xmlns:gsk="http://schemas.xmlsoap.org/ws/2004/08/eventing/wrap">
  <s12:Header>
    <wsa:Action>http://schemas.xmlsoap.org/ws/2004/08/eventing/wrap/GenericSinkPortType/NotifyEvent
    </wsa:Action>
  </s12:Header>
  <s12:Body>
    <gsk:Notify actionURI="http://www.example.org/oceanwatch/2003/WindReport"
    >
      <!-- event element -->
      </gsk:Notify>
  </s12:Body>
</s12:Envelope>
```

The detailed change is to add a new Appendix IV to WS-Eventing as follows:

#### Appendix IV — WSDL for Standard Wrapped Delivery

If an Event Subscriber specifies the wrapped event delivery format

[“http://schemas.xmlsoap.org/ws/2004/08/eventing/DeliveryFormats/Wrap”](http://schemas.xmlsoap.org/ws/2004/08/eventing/DeliveryFormats/Wrap)

in the Subscribe request message, then the Event Sink must implement the following abstract WSDL and the Event Source must send the notification messages wrapped in the element defined in the WSDL. If necessary, the concrete WSDL can be conveyed to the Event Source using the <wse:NotifyTo> EPR in the Subscribe request message, or retrieved by the Event Source using WS-MetadataExchange.

```
<definitions
  xmlns="http://schemas.xmlsoap.org/wsdl/"
  xmlns:xs="http://www.w3.org/2001/XMLSchema"
  xmlns:wsam="http://www.w3.org/2007/05/addressing/metadata"
```

```
