Turn on COVID-19 Exposure Notifications

[Actual copy to be provided by Public Health Authority]

These notifications are designed to notify you if you've been exposed to a user who later reports themselves as testing positive for COVID-19. You can choose to turn off these notifications at any time.

Exposure notifications rely on the sharing and collecting of random IDs. These IDs are a random string of numbers that won't identify you to other users and change many times a day to protect your privacy.
